PRESSRELEASE PRESSRELEASE

MAY 12TH, 2006

ADDEX just started up one of the world's largest and most sophisticated blown film lines:

A 3 layer coextrusion line producing 3300-4620 lbs/h (1650-2100kg/h) of up to 40' (12m) layflat film with an unprecedented +/- 4-6% film thickness variation.

The 2 m patented REDI die with the also patented IGC (Internal Gauge Control) System make such a superior performance possible. The die is fed by 3 x 120 mm 30 L/D ADDEX extruders and controlled by its Talon full line control.

The customer produces: Agricultural Films with as much as 100% reprocessed blends of LLDPE/LDPE and Horticultural Films (i.e. Strawberry Tunnels). The film thickness ranges from 3 -14 mil (75-350 microns).

ADDEX is a producer of high-technology blown film lines
